The RPCI-11 human BAC library was made from the blood of one male donor, as described by Goegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute (http://pabcpac.med.buffalo.edu)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Louis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The clone sequenced to the left is RP11-547F18; the clone sequenced to the left is RP11-547F18; the clone sequenced to the right is RP11-4484, 200 base pair overlap. Actual end of this clone is at base position 18711 of RP11-4464.

NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tcm.cdu/docs/genbank draft data.html).

NOTE: This is a working draft' sequence. It currently consists of 65 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                 Norley, K.C.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                           Pred. ```
The present sequence encodes a murine de novo DNA cytosine
methyltransferase designated Dnmt3a. The polypeptides can be administered
methyltransferase designated Dnmt3a. The polypeptides can be administered
CC treat diseases associatly by expressing encoding polynucleotides, to
treat diseases associatly by expressing encoding polynucleotides, to
c treat diseases associated with DNA cytosine methyltransferase, such as
cc neoplastic disorders e.g. carcinomas, sarcomas and leukemias. They can
be used to disganose, or determine susceptibility to neoplastic disorders,
by assaying for polypeptide expression levels in mammalian cells/body
fluids. They are useful to screen for compounds inhibiting/activating the
copolypeptide. The polypeptides can also be used for in vitro de novo
cr methylation of DNA. Such in vitro methylation may be used to direct or
regulate DNA expression in biological systems, e.g. recombinant DNA
condecrase expression of a desired polypeptide for which the native DNA
is under-methylated or not methylated. The polypeptides can also be
colypeptide or therapeutically e.g. to treat neoplastic disorders. The
polypeptide or therapeutically e.g. to treat neoplastic disorders. The
cuseful diagnostically.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

```
The present sequence encodes a human de novo DNA cytosine methyltransferase designated DNMT3A. The polypeptides can be administered therapeutically, especially by expressing encoding polynucleotides, to treat diseases associated with DNA cytosine methyltransferase, such as neoplastic disorders e.g. carcinomas, sarcomas and leukemias. They can be used to disagnose, or determine susceptibility to neoplastic disorders by assaying for polypeptide expression levels in mammalian cells/body
                                                             4020

fluids. They are useful to screen for compounds inhibiting/activating the polypeptides can also be used for in vitro de novo methylation of DNA. Such in vitro methylation may be used to direct or regulate DNA expression in vitro methylation may be used to direct or regulate DNA expression in biological systems, e.g. recombinant DNA methylated in vitro may be introduced into a cell/organism to increase or decrease expression of a desired polypetide for which the native DNA is under-methylated or not methylated. The polypeptide can also be used to produce antibodies which are useful to detect and purify the polypeptide or therapeutically e.g. to treat neoplastic disorders. The useful diagnostically.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      239

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancer of the adrenal gland, bone, marrow, breast, gastroincestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic ansemia, autoimmune thyroiditis, diabetes mallitus, Crohn's disease, multiple solerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal

The present sequence encodes a murine de novo DNA cytosine
methyltransferase designated Dnmt3b1. The Dnmt3b gene also produces,
through alternate splicing, at least two shorter isoforms of 840 and
control of through alternate splicing, at least two shorter isoforms of 840 and
control of the specification. The polypeptides can be administered
control of given in the specification. The polypeptides can be administered
control of specification. The polypeptides can be administered
control of specification. The polypeptides can be administered
control of specification. The polypeptides can also be used to disagnose, or determine susceptibility to neoplastic disorders,
control of the polypeptide expression levels in mammalian cells/body
control of DNA. Such in vitro methylation may be used for in vitro de novo
control of DNA. Such in vitro methylation may be used for in vitro and control of control of a desired polypeptide can also be
control of produce antibodies which are useful to detect and purify the
control of produce antibodies which are useful to detect and purify the
control of diagnostically e.g. to treat neoplastic disorders. The
control of diagnostically.

The polypeptide or therapeutically e.g. to treat neoplastic disorders.

The polypeptide or therapeutically e.g. to treat neoplastic disorders.

The polypeptide or therapeutically e.g. to treat neoplastic disorders.

The polypeptide or therapeutically e.g. to treat neoplastic disorders.

The polypeptide are useful to produce probes and primers which are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8
                                                                               CC ABQ56306 to ABQ60787 represent isolated nucleic acids (I) differentially creatives of cancer tissues. ABB78993 to ABB79004 represent proteins concerded by the ABQ60776 to ABQ60787 nucleic acid sequences. (I) can be cused in antisense therapy. An antibody immunoreactive with a polypeptide cc encoded by (I) is useful for detecting cancer in a patient sample, and cc nucleic acid which hybridises to (I) in a cell. A probe/primer derived cc from (I) can be used for determining the presence of a nucleic acid which hybridises to (I) in a cell. A probe/primer derived cc hybridises to (I), and for determining the presence of a nucleic acid which cc fells from a patient. (I) is useful for determining the presence of cf cells from a patient. (I) is useful for determining the presence of colon cancer in a cell or tissue type, for determining the presence or cc state of other type of cancer, in antisense therapy, to generate corresponding gene resides, and in tissue profiling, forensics, genetic cantipolies, mapping and diagnostic applications. (I) can be used to raise and to accreen for neartifice analysis, mapping and cancers and antiscness and antiscness.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated nucleic acid that is differentially expressed in tissues useful for determining the presence of colon cancer in or tissue type, and in antisense therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     burgess C, Astle JH,

AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens. The colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therewent by the production. N and P may be used in the prevention, chargapy and vaccine production. N and P may be used in the prevention, cassociated with decreased expression by rectifying mutations or deletions associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps. by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis to express the proteins and present call and culturing the cell concernment of colorectal carcinomas and cancers. Additioning the cell cand page septent invention.

NB. Pages 66 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027 to 1052, 7921 and 7922.

XXXOOOOOOOOOOOOOOOOOOOOO Claim 8; SEQ ID 11099; 2537pp + CD ROM; English

sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs against to AAH13628 and AAH13633 to AAH13642 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of represent oligo of the present of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end oligonucleotide comprises at least 15 nucleotides; or (b) a the 5602 nucleotide sequences defined in the specification, invention describes primer sets for synthesising 5602 invention. combination where the

These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a coding sequence of the
